1

Login to RealControl

Access your test account

<https://realcontrol.sandbox.realexpayments.com>

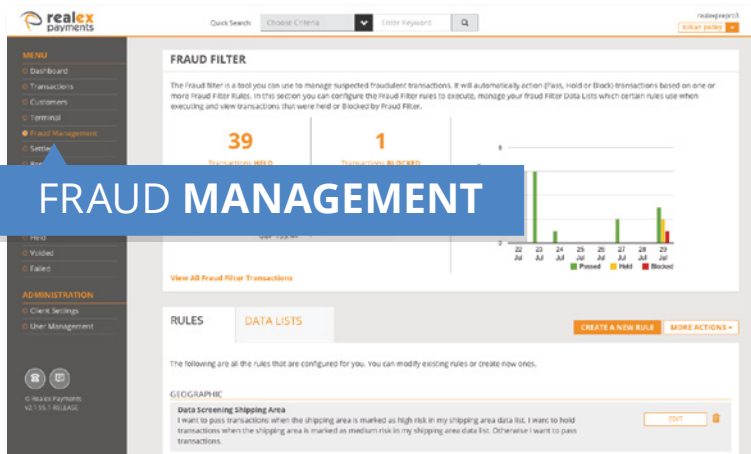

Access your live account

<https://realcontrol.realexpayments.com>

Enter your Client ID, Username and Password and click "Sign In".

Access the Fraud Management Page

Click on "Fraud Management" on the left hand side menu.

Note: You must have sufficient privileges to access this functionality. You must be a Fraud Manager or an Administrator. Fraud Analysts can review and manage Fraud Filter transactions but not change rules.

This user guide assumes that you have added countries in your "Payment Method Country" data list and flagged them as "Low Risk". Please see the user guide "How do I add transaction data to my data list?".

Click on “Create a New Rule”

reallex payments

Quick Search: Choose Criteria Enter Keyword

FRAUD FILTER

The Fraud Filter is a tool you can use to manage suspected fraudulent transactions. It will automatically action (Pass, Hold or Block) transactions based on one or more Fraud Filter Rules. In this section you can configure the Fraud Filter rules to execute, manage your Fraud Filter Data Lists which contain rules used when executing and view transactions that were held or Blocked by Fraud Filter.

39 Transactions **HOLD** (last 30 days)
Total Value: EUR 58,034.48, GBP 135.44

1 Transactions **BLOCKED** (last 7 days)
Total Value: EUR 424.24

View All Fraud Filter Transactions

RULES DATA LISTS **CREATE A NEW RULE** MORE ACTIONS

The following are all the rules that are configured for you. You can modify existing rules or create new ones.

CREATE NEW RULE

GEOGRAPHIC
Data Screening
I want to pass transactions where transactions were transactions

Fraud Management Dashboard

On the Fraud Management Dashboard Screen, click on the “Create A New Rule” button.

Quick Search: Choose Criteria Enter Keyword

CREATE A NEW RULE

A rule will allow you to action transactions (HOLD, BLOCK or PASS) according to certain statements. To help you create the rule we have grouped them into the different categories below.

- CARD NUMBER**
Use this for any rule you want to implement relating to card numbers. You can, for example, perform an action (Pass, Hold or Block) on the frequency of usage of a card number. You can also create a rule for all High Risk card numbers.
- CUSTOMER**
Use this for anything to do with your customer number or cardholder name. You can, for example, perform an action (Pass, Hold or Block) on a transaction based on the number of times the customer number has been seen with different card numbers.
- PRODUCT DETAILS**
Use these rules if you want to action (Pass, Hold or Block) transactions when the variable reference has been used with different Card Numbers. You can also create a rule for all High Risk Product IDs.
- AMOUNT**
Use this if you want to perform an action (Pass, Hold or Block) when the amount is greater than a defined amount.
- THIRD PARTY**
Use these rules if you want to action (Pass, Hold or Block) transactions depending on the results coming back from a third party such as Decision Manager.
- GEOGRAPHIC**
Use this for anything related to a location or country. You can, for example, perform an action (Pass, Hold or Block) on a transaction if the shipping and the billing countries are different or on cards from certain countries.

Category Selection Screen

Select the relevant category, in our example select “Geographic”.

3

Create Your Rule

Give the Rule a Name

This is a name that will be re-used throughout the application. In our example type in "Issuing Country Exclude".

Create your statements

Each rule is made up of one or more statements, and each statement has an action and one or more conditions.

In this case:

I want to pass transactions (action)

When the issuing country is marked as low risk (condition)

Set the default statement

The default statement determines what will happen if none of the other statements apply for this rule.

In this case, we would set the default statement to:

Otherwise I want to block transactions

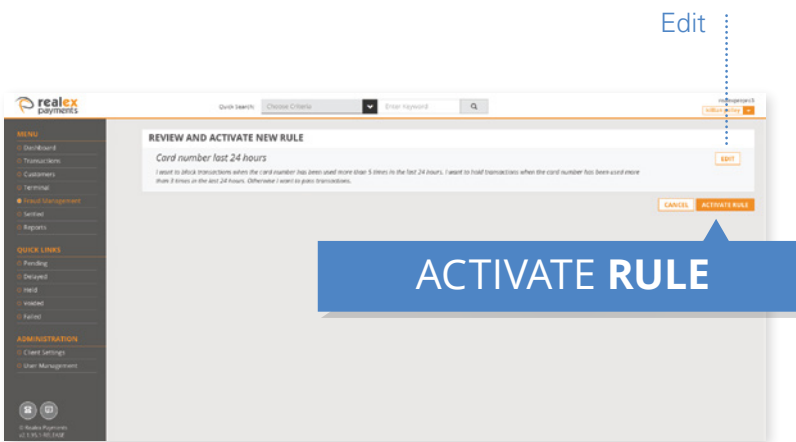

Once done

Click on the "Review and Activate" button.

4

Review and Activate

Review your rule

Review the rule that you have just created and edit or activate it.

It is important to note that activating, deleting or editing Fraud Filter Rules, will result in a change to the transaction response that is returned by Realex Payments to your system, either via XML or via the Hosted Payment Page. Please ensure your system is capable of handling changes to the Fraud Filter response from Realex Payments to prevent any impact to your transaction processing. For full details of the changes see the Fraud Management Developer Guides.

What are the PASSIVE and OFF modes used for, and how do I switch between modes?

PASSIVE Mode Will execute the rules and indicate what action (Pass, Hold or Block) your rules would have taken without actually performing that action.

RULES
PASSIVE MODE ⓘ

RULES
OFF MODE ⓘ

What are the PASSIVE and OFF modes used for?

By default, RealEx Payments' Fraud Management tool is in ACTIVE mode. This means that as soon as you create your rules, they will be applied to all your transactions on all your subaccounts and the relevant action will be applied.

PASSIVE mode can be used to test your rules before you use them in ACTIVE mode. When the Fraud Filter is in PASSIVE mode, the rules that you have set up will be applied but the actions associated with them (Pass, Hold or Block) will not be executed. However, you will be able to see the action that would have been taken had your Fraud Filter been in ACTIVE mode.

Once you are confident that your rules are working as expected, you can then switch to ACTIVE mode.

When the Fraud Filter is in OFF mode, your rules will be not executed but they will be retained in case you want to change to PASSIVE or ACTIVE mode in the future. For security, you will be required to enter your password in order to set the Fraud Filter mode to OFF.

How do I switch between modes?

You can access the PASSIVE and OFF mode from the "More Actions" button on the top right of the Fraud Dashboard screen.

Fraud Rules

Realex Payments Fraud Management consists of a number of rules made up of actions (Pass, Hold or Block) and one or more conditions.

I want to Pass/Hold or Block transactions when ...

All categories ...the data list data* is marked as high/medium/low risk

Card number ...the card number has been used more than a number of times in the last 24 hours
...the card number has been authorised more than a number of times in the last 24 hours
...the card number has been used more than a number of times in the last week
...the card number has been used more than a number of times with a different cardholder name
...the card number has been used more than a number of times with a different customer number
...the card number has been used more than a number of times with a different variable reference
...the card number has been authorised more than a number of times in the last week
...the card number has been authorised more than a number of times with a different cardholder name
...the card number has been authorised more than a number of times with a different customer number
...the card number has been authorised more than a number of times with a different variable reference

Geographic ...the shipping and the billing country is different or the same or missing one information
...the shipping and the issuing country is different or the same or missing one information
...the shipping and the home country is different or the same or missing one information

Amount ...the amount in a currency is greater than an amount

Customer ...the cardholder name has been used more than a number of times with a different card number
...the customer number has been used more than a number of times with a different card number

Product ...the variable reference has been used more than a number of times with a different card number

Third party ...the Decision Manager response is (accept/reject/review/error).

* The data list allows you to specify values that should trigger an action should they appear within a particular transaction field. The fields for which data can be listed are:

Card number	Product ID	Customer Number	Shipping Area	Billing Area	BIN range
Cardholder name	Variable Reference	Customer IP Address	Shipping Country	Billing Country	Issuing Country
